Network solutions

Simplify Network Operator Adoption

- Single platform integration for network operators across multiple specialist equipment providers.
- Simplified adoption and integration enables best-of-breed selection.
- Operator outsourcing of integration risk and version control risk.
- Extensible platform for full operator service management and orchestration

Offload EMS/NMS Development

- Vendor agnostic, open-source based network management software.
- Tailored to work with your solutions.
- Equipment integration via legacy EMS, Mediator or Native interface
- Continuous development and improvement of EMS/NMS by an industry specialist
- Extensible platform for full supplier service management and orchestration

ht.Connect Integration & Support

Supporting each of our **ht.Connect** apps is the option of turn-key integration within your O-RAN or TIP MUST environment, including platform configuration and software customisation to suit the exacting needs of your network.

We provide optional Level 2 and 3 operational support, providing your Network Operations team with the added confidence of assured access to our developers during standard business hours – 8hrs x 5 days/week, extending to full 24 x 7 operational support in 2025.

And if your business needs require you to be working with a bespoke equipment supplier, we provide in-house development of new mediators to work with your choice of network equipment.
